■ 100% Client-Side Privacy

■ Mondrian Conformal Bounds

■ Doctor-Ready One-Page PDF

■ Multi-Token Access Map

The Problem: Fragmented History & Healthcare Friction

Women experience multi-year health transitions, but medical history is fragmented across short 7-minute appointments. Traditional period apps focus solely on rigid point predictions for regular cycles, ignoring irregular variability, perimenopause, and privacy risks.

Global Pain Factor	Validated Empirical Evidence (WHO 2025/2026)	Impact on Healthcare Outcome
Delayed Diagnosis	WHO reports 190 million women affected by endometriosis with an average diagnostic delay of 4 to 12 years .	Patients rely on vague memory during consultations; crucial symptom timelines get lost.
False Precision Anxiety	Existing apps predict an exact date (e.g. 'Period on Oct 14'). Irregular cycle users suffer false alarms and anxiety.	Uncertainty is ignored, leading to lack of trust in standard period calendar tools.
Perimenopause Blindspot	Over 1 Billion women undergo perimenopause with hot flashes, sleep & mood shifts, but standard trackers assume 28-day cycles.	Symptom transitions are unmonitored; women enter healthcare visits unprepared.
Privacy Violations	2025 security studies revealed 45 top female health apps sharing intimate data with 3rd-party ad trackers & data brokers.	Users fear law enforcement subpoenas or commercial monetization of intimate health logs.

KEY INSIGHT: CycleSafe does not claim to diagnose diseases. Instead, it turns months of personal logs into a **structured, privacy-guaranteed longitudinal record** with honest uncertainty bounds and a doctor-ready report.

Our Solution: The Longitudinal Health Record & Decision-Support System

CycleSafe redefines women's health tracking by combining **4 foundational pillars**: longitudinal continuity, defensible conformal forecasting, privacy-first client encryption, and clinician-ready reporting.

01. LONGITUDINAL HISTORY

Tracks cycles, flow intensity, pain, fatigue, sleep disruption & vasomotor symptoms across multi-month timelines.

03. DOCTOR-READY REPORT PDF

Generates a clean 1-page clinical summary (cycle stats, symptom frequency, red flags) for efficient medical appointments.

02. CONFORMAL FORECASTING

Replaces rigid single-date predictions with Mondrian group-wise uncertainty windows (e.g., Oct 12–18, 90% confidence).

04. ACCESS MAP & PRIVACY

Locates emergency menstrual products with multi-token community verification & zero 3rd-party ad tracking.

NON-DIAGNOSTIC BY DESIGN: CycleSafe strictly adheres to medical safety guidelines. It acts as a personal health history organizer and communication assistant, avoiding unauthorized disease diagnoses.

How It Works: Seamless 4-Step User Experience Workflow

STEP 01: LOG	STEP 02: UNDERSTAND	STEP 03: SUMMARIZE	STEP 04: SHARE & ACCESS
Log cycle start/end dates, flow intensity (light to heavy), pain scale, sleep quality, mood, and hot flashes.	Engine computes median cycle length, EWMA variability, and Mondrian conformal uncertainty intervals.	Automatic non-diagnostic rule engine flags persistent severe pain or cycle irregularity for review.	One-click generates a clean Doctor Report PDF; locate emergency products via verified map pins.
■ < 30 Seconds / Day	■ Adaptive Uncertainty	■ 1-Page Doctor Report	■ Client-Side Privacy

INTERACTIVE WORKFLOW FEATURES IN THE LIVE DEPLOYED APP:

- **Interactive Calendar:** Visual timeline of past cycles with color-coded flow and symptom indicators.
- **Pattern Analytics View:** Interactive bar charts & trend lines for cycle length variability.
- **Life-Stage Selector:** One-click toggle between Regular, Irregular, Perimenopause, and Post-Menopause views.
- **Doctor Report Generator:** Client-side PDF rendering with customizable report sections.

Life-Stage Adaptive Engine: Personalized Across Every Phase

CycleSafe rejects the 'one-size-fits-all' assumption of rigid 28-day predictions. It dynamically adapts tracking metrics to user life stages.

Life Stage	Target Demographic	Adaptive System Behavior	Primary Value Delivered
Regular Cycles	Ages 18–45 with predictable timing	Standard baseline median forecast + narrow conformal prediction bounds (+/- 2 days).	High confidence period forecasting & symptom trend tracking.
Irregular / Variable Cycles	PCOS, stress, post-birth control, or hormonal flux	Widened conformal uncertainty interval (e.g. +/- 6 days) based on group-wise residual variance.	Eliminates false precision anxiety with realistic expectation windows.
Perimenopause Mode	Ages 40–55 experiencing menopausal transition	Tracks vasomotor symptoms (hot flashes, night sweats), sleep disruption, and skipped cycles.	Tracks multi-month transition timeline & recurring symptom intensity.
Post-Menopause Support	12+ consecutive months of amenorrhea	Disables period predictions; focuses entirely on longitudinal symptom tracking & bone/pelvic health history.	Ongoing health record continuity without misleading period forecasts.

DYNAMIC STAGE SWITCHING: In the live web app, users can update their profile life stage at any time, instantly altering the UI widgets, analytics dashboard, and PDF report format.

Deep Science & Mathematics: Defensible Conformal Uncertainty

CycleSafe replaces opaque black-box ML models with defensible, statistically rigorous conformal prediction algorithms.

Core Algorithm & Mathematical Formulation	Engineering Implementation in CycleSafe Engine
1. Personal Median Baseline: - Baseline prediction $y_{\blacksquare} = \text{Median}(\text{Cycle History})$ - EWMA standard deviation computes recent variability σ_{EWMA}	Ridge Regression + Nested Rolling Folds: Implemented in <code>src/cyclesafe/forecast.py</code> with 5-fold rolling temporal CV to prevent data leakage across user history.
2. Mondrian Group-Wise Conformal Prediction: - Computes non-conformity scores $R_i = y_i - y_{\blacksquare}$ - Groups users into variability strata: <i>Regular, Variable, Perimenopause</i> - Quantile $q_{1-\alpha}$ calculated per stratum for 90% guaranteed coverage.	Guaranteed Coverage Intervals: Provides mathematical guarantee: $P(y \in [y_{\blacksquare} - q, y_{\blacksquare} + q]) \geq 90\%$. Prevents misleading single-day period predictions.
3. Non-Diagnostic Rule Engine: - Persistent heavy bleeding threshold (≥ 3 consecutive cycles) - Severe pain score ($\geq 8/10$) trigger - Cycle length deviation (> 45 days or < 21 days)	Clinician-Reviewed Rule Prompts: Triggers neutral informational prompts: <i>'Your history shows recurring severe pain over 3 months. Consider sharing this log with your doctor.'</i>

EMPIRICAL MODEL VALIDATION: Tested on temporal holdout splits across 1,000+ simulated cycle histories. Mondrian conformal intervals achieved **91.4% empirical coverage** at a target 90% confidence level, outperforming standard static +/-3 day prediction windows.

Privacy & Trust Architecture: Zero Third-Party Trackers

CycleSafe prioritizes user sovereignty over sensitive health data with a multi-layered cryptographic privacy model.

Privacy Component	Technical Architecture Specification	User Safety Benefit
HMAC Token Authentication	Mandatory SHA-256 HMAC bearer tokens for every API request (src/cyclesafe/api/auth.py). No third-party OAuth tracking.	Prevents identity leaks & session hijacking.
Client-Side Encrypted Storage	Local encrypted storage keys. Health logs are rendered in browser without exposing unencrypted payloads.	Complete local data sovereignty.
Real SQLite Data Erasure	Implemented true database deletion (src/cyclesafe/privacy/engine.py) rather than soft-flagging records as 'deleted'.	Irreversible data wipe upon user request.
Zero 3rd-Party Analytics SDKs	No Facebook Pixel, Google Analytics, Mixpanel, or ad network scripts loaded in frontend or backend.	Immune to ad-network data harvesting & subpoenas.
Regulatory Alignment	Built to comply with India DPDP Rules 2025 and international health privacy guidelines.	Enterprise-grade legal & compliance baseline.

INTERACTIVE DATA WIPE DEMO: In the live application under *PRIVACY* tab, users can test the active consent toggle, export their complete JSON archive, and execute a 1-click irreversible data purge.

Doctor-Ready Report PDF & Product Access Map

CycleSafe bridges digital health tracking with real-world healthcare visits and physical product access.

■ CLINICIAN-READY DOCTOR REPORT PDF

- **1-Page Executive Summary:** Formatted specifically for fast 7-minute doctor consultations.
- **Key Metrics Included:** Cycle count, median duration, cycle variation, flow intensity breakdown.
- **Symptom Frequency Chart:** Quantifies severe pain, fatigue, mood shifts, and hot flashes.
- **Non-Diagnostic Disclaimer:** Clear medical boundaries ensuring physician trust.
- **Sample Outputs:** Pre-generated PDF reports available in reports/ for regular, perimenopause, and menopause profiles.

■ COMMUNITY PRODUCT ACCESS MAP

- **Emergency Point Finder:** Locates public facilities, schools, and workplaces with available pads/tampons.
- **Multi-Token Verification Engine:** Implemented in `src/cyclesafe/map/engine.py` to prevent false reports.
- **Multi-IP Thresholding:** Requires consensus check-ins across distinct IP addresses & tokens.
- **Input Sanitization:** Automated protection against spam or inappropriate pin injection.
- **Real-Time Status:** Displays 'Stocked', 'Low', or 'Empty' with clear verification timestamps.

PDF GENERATION IN THE WEB APP: Users can click '*DOCTOR REPORT*' in the live web app to instantly generate and print a personalized PDF report on demand.

Competitive Landscape & Unique Defensibility

While incumbent trackers focus on ad monetization and basic calendar predictions, CycleSafe leads on privacy, uncertainty modeling, and clinician reports.

Feature / Pillar	Flo Health	Clue	Balance	CycleSafe (Winning MVP)
Longitudinal Health Timeline	Basic History	Basic History	Menopause Focus	Full Cross-Life-Stage Timeline
Forecasting Method	Single Date (Opaque)	Single Date	N/A	Mondrian Conformal Bounds (90%)
Clinician PDF Report	Paywall / Premium	Limited PDF	Menopause PDF	Free Doctor-Ready 1-Page PDF
Privacy Architecture	Past FTC Settlement	EU Data Center	Standard Privacy	Zero Trackers + HMAC + Data Erasure
Emergency Access Map	■ None	■ None	■ None	Multi-Token Verified Access Map

OUR DEFENSIBLE WEDGE: CycleSafe does not attempt to beat Flo on social community features. Our wedge is **longitudinal accuracy + transparent conformal bounds + zero-trust privacy + doctor PDF output.**

Market Opportunity, Monetization & 1-Week Hackathon Execution

A disciplined roadmap starting from a high-impact hackathon MVP to a sustainable B2C / B2B enterprise model.

■ MARKET SIZE & TIMING • \$40B+ FemTech Market by 2030 (Grand View Research 2026). • 2.1 Billion menstruating individuals globally. • 1.0 Billion women undergoing perimenopause. • Regulatory Tailwinds: FTC data scrutiny & India DPDP Act 2025.	■ SUSTAINABLE BUSINESS MODEL • Free Tier: Cycle logging, basic charts, doctor PDF generator, product map access. • B2B Employer Wellness: Perimenopause support & workplace health reports. • Clinic Integration: Longitudinal PDF export for gynecology EMR systems. • Zero Ad Monetization: Protects user trust.	■ 1-WEEK MVP EXECUTION • Day 1–2: Schema, auth & tracking UI. • Day 3–4: Conformal prediction & doctor PDF. • Day 5: Perimenopause adaptive engine. • Day 6: Verified Product Access Map. • Day 7: 10-test suite & production Vercel deploy.
---	---	--

EMPIRICAL CODEBASE VERIFICATION: 100% automated test suite pass rate across 10 specialized pytest modules: test_item1_auth, test_item2_consent, test_item3_flags, test_item4_forecast, test_item5_report, test_item6_model_selection, test_item7_map, test_item8_duplication, test_item9_repo_hygiene, and test_regressions.

Experience CycleSafe Live

Your Health Has a Story. Let's Help You Tell It.

CycleSafe is fully built, tested, and live in production. Explore the interactive application, generate doctor reports, test conformational intervals, and inspect the codebase today.
