

CycleSafe - Longitudinal Health Summary

Non-diagnostic patient summary for clinical review

User ID: demo_peri	Age: 46	Life Stage: perimenopause
Cycle Records: 7	Symptom Records: 5	Data Quality: Low

Personal Baseline and Forecast Window

Historical Median: 32.0 d | Historical Mean: 35.0 d | SD: 5.2 d

Predicted Next Cycle: 34.0 days

80% Prediction Interval (experimental, wider uncertainty (training data covers ages 21 to 43)): 28.0-40.0 days

90% Prediction Interval (experimental, wider uncertainty (training data covers ages 21 to 43)): 25.0-43.0 days

Model: Personal Baseline Median (naive_median)

Note: Recent 3-cycle median (37.0d) differs from baseline (32.0d) by >= 3 days; forecast may lag the shift.

Observed Patterns and Symptoms

- Cycle-length change: Recent median shift: 5.0 days
- Logged Symptoms: hot_flashes, night_sweats

Discussion Points for Doctor Review

- Discuss recent timing shift and vasomotor symptom history.

Notice: CycleSafe provides observational statistical modeling for self-tracking. It does not provide medical diagnosis, disease identification, or clinical guarantees.
