

CycleSafe - Longitudinal Health Summary

A structured view of recorded history.

User ID: demo_regular	Age: 26	Life Stage: menstrual
Cycle Records: 7	Symptom Records: 3	Data Quality: Low

Personal Baseline and Forecast Window

Historical Median: 30.0 d | Historical Mean: 30.1 d | SD: 2.0 d

Predicted Next Cycle: 29.4 days

80% Prediction Interval (calibrated on dev OOF): 26.2-32.5 days

90% Prediction Interval (calibrated on dev OOF): 24.8-34.0 days

Model: ridge

Observed Patterns and Symptoms

- No significant timing or variability shift detected.
- Logged Symptoms:** cramps, fatigue

Discussion Points for Doctor Review

- Continue tracking.

Longitudinal Summary Notes

DATA QUALITY

Cycle history Good

History length 7 cycles

Missing values Low

Recent consistency High

Forecast eligibility: YES

PERSONAL BASELINE

Historical median: 30.0 days.

Recent median: 30.0 days.

Historical variability: 2.0 days.

Wellbeing records: sleep: recent 3.3/5 vs historical 3.3/5 (similar); mood: recent 3.7/5 vs historical 3.7/5 (similar); energy: recent 3.3/5 vs historical 3.3/5 (similar).

OBSERVED CHANGES

Repeatedly recorded symptoms: cramps.

FORECAST + UNCERTAINTY

Estimated next cycle: 29.4 days.

80% estimated window: 26.2-32.5 days.

90% estimated window: 24.8-34.0 days.

FORECAST CONFIDENCE

History ██████████ 87%

Pattern stability ██████████ 78%

Model agreement ██████████ 81%

Overall evidence strength: High

MODEL AGREEMENT

ridge 29.4

elastic_net 29.3

random_forest 30.1
extra_trees 30.3
hist_gradient_boosting 29.6
Spread: 0.9 days
High agreement

MODEL CONTEXT

Self-reported life-stage context: menstrual.

BRING THIS TO YOUR DOCTOR

- Discuss repeated symptoms: cramps.
- Discuss forecast estimate and uncertainty window.
