

CycleSafe - Longitudinal Health Summary

A structured view of recorded history.

User ID: demo_peri	Age: 46	Life Stage: perimenopause
Cycle Records: 8	Symptom Records: 5	Data Quality: Low

Personal Baseline and Forecast Window

Historical Median: 33.0 d | Historical Mean: 33.8 d | SD: 5.1 d

Predicted Next Cycle: 34.0 days

80% Prediction Interval (calibrated on dev OOF): 30.8-37.1 days

90% Prediction Interval (calibrated on dev OOF): 29.4-38.6 days

Model: ridge

Observed Patterns and Symptoms

- **Cycle-length change:** Recent median shift: 6.0 days
- **Logged Symptoms:** hot_flashes, sleep_disruption, fatigue

Discussion Points for Doctor Review

- Review cycle length change.
- Continue tracking.

Longitudinal Summary Notes

DATA QUALITY

Cycle history Good

History length 8 cycles

Missing values Low

Recent consistency Moderate

Forecast eligibility: YES

PERSONAL BASELINE

Historical median: 33.0 days.

Recent median: 39.0 days.

Historical variability: 5.1 days.

Wellbeing records: sleep: recent 2.3/5 vs historical 2.3/5 (similar); mood: recent 2.7/5 vs historical 2.7/5 (similar); energy: recent 2.3/5 vs historical 2.3/5 (similar).

OBSERVED CHANGES

Recent cycle median is ~6.0 days longer than baseline.

Repeatedly recorded symptoms: hot_flashes, sleep_disruption.

A later-timeline symptom-frequency signal: fatigue.

FORECAST + UNCERTAINTY

Estimated next cycle: 34.0 days.

80% estimated window: 30.8-37.1 days.

90% estimated window: 29.4-38.6 days.

FORECAST CONFIDENCE

History ██████████ 100%

Pattern stability ██████████ 75%

Model agreement ██████████ 47%

Overall evidence strength: Moderate

MODEL AGREEMENT

ridge 34.0

elastic_net 33.8

random_forest 33.8

extra_trees 33.7

hist_gradient_boosting 31.4

Spread: 2.6 days

High agreement

MODEL CONTEXT

Self-reported life-stage context: perimenopause.

BRING THIS TO YOUR DOCTOR

- Discuss recent change in cycle timing.
- Discuss repeated symptoms: hot_flashes, sleep_disruption.
- Discuss forecast estimate and uncertainty window.

***Notice:** CycleSafe provides observational statistical modeling for self-tracking. It does not provide medical diagnosis, disease identification, or clinical guarantees.*
